

Design & Build

About the Workstream

This workstream defines the heart of Flow with how developers build their automations and the building blocks they have available. It brings together schema, authoring, and platform integration into one fast, intuitive, and intelligent experience that redefines how automation is created and debugged across UiPath.

Goal

A fast, intuitive, and intelligent single Flow experience where developers build, debug, and collaborate seamlessly - faster and more fluid than n8n.

Outcome

A unified, end-to-end Act II developer experience that

- abstracts second-level problems through **smart defaults** and **implicit decisions**
- enables high-velocity automation **development without friction**

Operating Structure

Function	Owners
Product Lead	@Gunter De Souter
Engineering Lead	@Sam Nuziale + @Cosmin Popescu
Design Lead	@Carl Schultze + @Andreea Ene
Key Contributors	Product: @Guy Van Wert @Milo Shields @Ramsay Grove Engineering: @Rahul Sharma @Rocky Madden @Gong Zhang @Cristian Florin Calina @Shannon Koh

Cadence	2x weekly (30 min) sync to focus on experience mockups, open decisions, dependencies, and progress blockers
----------------	--

 Key Priorities / Urgent Calls to Make

Priority	Details	Outcomes
Roadmap for core node types	Define the foundational node taxonomy and establish the delivery roadmap across logic, data, action, HITL, and trigger categories.	📄 Maestro Flow PD Private Preview [January 2026]
Define design & build principles	Capture the guiding principles for Flow authoring, ensuring simplicity, speed, and a developer-first design ethos aligned with the Flow vision.	

 Risks / Red Flags / Decisions
